

RGT ALIZZE *Secure your yield*

RGT ALIZZE is a new hybrid variety of Winter Oilseed Rape from RAGT, which combines exceptionally high yield potential with an excellent agronomic profile. RGT ALIZZE is a candidate variety for recommendation in the UK for 2015/16, having the highest seed yield and gross output for the North region. RGT ALIZZE also has a top rating for Light Leaf Spot (LLS) resistance which is the most damaging disease to WOSR yields in Ireland (similar to septoria in winter wheat).

Very High Yield Potential

	Compass	Anastasia	ALIZZE
Relative Treated Seed Yield	100	109	113
Relative Gross Output	102	109	115
Oil Content %	45.4	44.1	45.9
Earliness of Ripening	5	5	6
Plant Height (cm)	156	147	151

Source ; Excerpts from HGCA WOSR Rec List / Rec List trials (North region)

- **Medium-short variety with excellent resistance to lodging and stem stiffness**
- **No lodging worries = higher efficiency / output at harvest**
- **High oil content, easier to trade + more valuable per tonne**

Remember the code for RGT ALIZZE to unlock the potential !

9 Resistance to lodging

8 Stem stiffness

7 Earliness of flowering

8 Resistance to light leaf spot

6 Resistance to stem canker

Limited seed available from Goldcrop in Autumn 2015
