

RGT ALIZZE

Secure your yield

- Excellent resistance to lodging and stem stiffness
- No lodging worries
= higher efficiency / output at harvest
- Earliest variety to flower for max pod fill potential
- High oil content, easier to trade + more valuable per tonne

RGT ALIZZE is a hybrid WOSR variety which combines very high seed yield potential with an excellent overall agronomic profile. In particular, RGT ALIZZE has very good resistance to Light Leaf Spot (LLS) which is the most damaging disease to WOSR crop yields in Ireland. The variety also boasts good resistance to lodging and flowers early, allowing maximum pod fill potential and yield development.

RGT ALIZZE is now fully recommended in the UK for both the North and East-West regions. It is also included in the Irish official trials and is in its third year of evaluation in 2018.

	RGT ALIZZE	Anastasia	PT234
Gross Output (100 = 5.3t/ha)	109	110	104
Oil Content (%)	46.0	45.1	45.8
Earliness of Flowering	8	6	7
Earliness of Maturity	5	5	6
Plant Height (cm)	151	145	151

Remember the code for **RGT ALIZZE** to unlock the potential !

- 8** Resistance to lodging
- 8** Stem stiffness
- 8** Earliness of flowering
- 7** Resistance to light leaf spot
- 5** Resistance to stem canker
