

OSPREY

WINTER OILSEED RAPE

- >> Proven in Irish Trials and recommended for sowing in Ireland by DAFF
- >> Commercially grown and proven on Irish farms for over 3 years
- >> Excellent Germinative Energy for rapid establishment - ideal for min-till/Heva tyre systems
- >> Extremely Consistent Yields year on year, both on-farm and in trials
- >> Highest Oil Content of all varieties currently listed
- >> Excellent shedding and lodging resistance (important in a wet harvest)

Variety	Seed Yield	Oil Content	Lodging Resistance
OSPREY	1.92 t/ac	46.1%	8.0
Compass	1.92 t/ac	46.6%	8.0
Flash	2.11 t/ac	45.6%	7.0

OSPREY has a superb package of agronomic characters. It offers high yields of massive seeds with a great ability to stand. It is easy to manage, doesn't grow too tall (1.5 metres) can be sprayed off pre-harvest with conventional machinery, and direct cut (no need for swathing). It is a superb variety for entry level and experienced growers alike.

Rapid Establishment

OSPREY is a great variety to establish and get away quickly after sowing. It has the highest Germinative Energy of any variety. This is a measure of a varieties ability to develop quickly into a seedling under ideal growing conditions. This makes OSPREY equally good to establish whether sown early or late, using a conventional plough based system, or using a min-till system such as the Heva drill.

NOW WITH CRUSIER® SEED TREATMENT

All **OSPREY** seed sold this year will be treated with Cruiser, an excellent combined fungicide / insecticide treatment as standard. Cruiser offers:-

- >> Better seed vigour, more rapid emergence, with better root systems and better overall stress tolerance
- >> Control of Flea beetle, mealy aphids, and cabbage root fly
- >> Increased yield potential with up to 10% improvement possible

**GROW OSPREY IN 2012 AND
